Listings/Approvals:

- UL Guide (NKPZ) for industrial control equipment per UL Standard 508 Industrial Control Equipment
- UL Guide (MFHX) for heating/cooling appliance switch per UL Standard 353 Limit Controls
- CSA Class (321106) for industrial control equipment per CSA Standard C22.2 No. 14-M Industrial Control Equipment

Maximum Service Pressure: 250 PSI

Enclosure:

NEMA Type 1 (For indoor use only)
Formed sheet metal with powdercoat finish. Not for use in hazardous locations.

Contacts:

IFS01: One SPDT (Form C) switch
IFS02: Two sets of SPDT (Form C) switches to provide versatility in wiring two separate circuits.
15 Amps at 125/250VAC
.5 Amps at 125VDC
.25 Amps at 250VDC

Motor Ratings: 120VAC 240VAC
Horsepower: 1/8 1/4
AC F.L.A.: 3.8 2.9
AC L.R.A.: 22.8 17.4

Pilot Duty Rating: 125 VA 120/240 VAC

IFSH1/2 Contacts:

IFSH1: One SPDT (Form C) switch
IFSH2: Two sets of SPDT (Form C) switches to provide versatility in wiring two separate circuits.
22 Amps at 125/250VAC

Motor Ratings: 120VAC 240VAC
Horsepower: 1/2 1
AC F.L.A.: 9.8 8.0
AC L.R.A.: 58.8 48.0

Pilot Duty Rating: 125 VA 120/240 VAC

Ambient Temperature Range: 32°F/176°F (0°C/80°C)

Media Temperature Range: 32°F/250°F (0°C/121°C)

Pipe Connections:

- 1" NPT Brass on models IFSxxB
- 1" NPT 316 Stainless Steel on models IFSxxS

Conduit Entrance: Two openings for 1/2" conduit

Usage: For pipe sizes 1" - 8"

Caution: This device is not intended for applications in explosive environments.

Note: IFSW Series available with NEMA 4 enclosure for outdoor use. (See bulletins #102-026 & #102-027 or Catalog 100-8.2).
MOUNTING AND INSTALLATION

The Model IFS may be mounted in a horizontal pipe line or a vertical pipe line with upward liquid flow. It is not recommended for installations where flow is downward. When mounted in a horizontal pipe line the switch will trip at a lower flow rate than shown in Fig. 7.

Mount the device in a section of pipe where there is a straight run of at least 5 pipe diameters on each side of the flow switch. Do not locate adjacent to valves, elbows or orifices. The switch should be mounted so the terminals or wire leads are easily accessible for wiring.

IFS models with flexible paddles are furnished with 4 paddles. Rigid paddle models are furnished with 2 paddles. For pipe sizes 1", 2", 3" or 6", use the paddles provided. Intermediate sizes may be trimmed from the appropriate paddle using the paddle template in Fig. 5. The paddle must not touch the inside of the pipe or bind in any way. Paddles smaller than the actual pipe size should be used for added support and higher sensitivity, see Fig. 3. The paddles must be properly attached and the screw that holds the paddle must be securely tightened.

For a 1" pipe application mount in a standard 1" x 1" x 1" tee. Use a reducing tee for larger sizes of pipe to keep flow switch close to pipe and provide adequate paddle length in the flow stream.

Example: Use a 2" x 2" x 1" tee for 2" pipe. A weldolet may also be used. Screw the device into the tee fitting as shown in Fig. 4. The flat of the paddle must be at a right angle to the flow. The arrow on the side of the bushing must point in the direction of flow, see Fig. 1.

Sensitivity Adjustment Note:

Turn screw clockwise to increase the flow rate required to activate the switch.

Turn screw counter-clockwise to decrease the flow rate required to activate the switch.

FIG. 1

FIG. 2
FIG. 3
Typical paddle arrangement for 6" to 8" pipe, using smaller flexible paddles for added support and higher sensitivity.

FIG. 4
CAUTION:
Screw the device into the TEE fitting as shown. Care must be taken to properly orient the device for the direction of the flow. Do not tighten by grasping the switch enclosure. Use the wrenching flats on the bushing only. Turning radius required for mounting the IFS is 3".

FIG. 5
Use the drawing at right as a template and trim at the dotted arc when trimming the appropriate paddle for intermediate pipe sizes.

CAUTION:
The paddle must not touch the inside of the pipe or bind in any way.

NOTE:
When installing rigid paddles, do not stack paddles. Only install ONE paddle that best fits the pipe.

NOTE:
When installing rigid paddles, do not stack paddles. Only install ONE paddle that best fits the pipe.
WIRING
Use properly rated temperature supply wire for the anticipated service temperature.
Make all electrical connections in accordance with the National Electrical Code and local regulations.
See Figs. 6A and 6B for diagrams illustrating switch action.

ADJUSTMENT
Remove switch cover and turn the sensitivity adjusting screw clockwise to increase the flow rate required to actuate the switch. Turn the sensitivity adjusting screw counter-clockwise to decrease the flow rate required to actuate the switch. (See Fig. 1.) Be sure to replace the cover upon completion of the installation and adjustment.

CAUTION: Check the installation for "no-flow" switch operation. Make appropriate adjustments to the sensitivity adjustment screw to be sure the switch restores fully at the desired flow rate.

NOTES:
1. Typical flow rates for 1" to 1 1/2" pipe sizes are averages which may vary approximately ±1 GPM with the use of a bronze reducing tee.
2. Typical flow rates for 2" to 8" pipe sizes are averages which may vary ±10% with the use of a 1" weldolet.
(*) Flow rates for these sizes are calculated.
